

Previewing on Desktop

To preview the currently active QML file on the desktop:

- > Select **Build > QML Preview**.
- > Select the  (**Show Live Preview**) button.
- > Press **Alt+P**.

To preview any QML file that belongs to the project, right-click the project name in the **Projects** view, and select **Preview File**.

To preview the whole UI, select **Show Live Preview** when viewing the main QML file of the project.

To view the UI in different sizes, select the zooming level on the toolbar.

The frames-per-second (FPS) refresh rate of animations is displayed in the **FPS** field.

Selecting the Preview Tool

By default, the QML runtime is used for previewing. To use some other tool, specify it in the **QML viewer** field in the **Properties** panel of the project in the **Desktop** mode.
