

Setting Up IncrediBuild

IncrediBuild accelerates process execution and thus shortens the time you spend on building C++ code. In addition, you can view the build progress in the graphical Build Monitor.

The IncrediBuild plugin is delivered with Qt Creator. For more information, see [IncrediBuild for Qt Creator](#).

To use IncrediBuild, install IncrediBuild Agent on the development host. Then specify IncrediBuild build steps for your project. For more information, see [IncrediBuild Build Steps](#).
