

Search

In the **Code** view, you can view and modify the code in a **UI file** (.ui.qml) or component file (.qml) that is generated when you create components in the **2D** or **3D** view and specify their properties in **Properties**.

```
1 import QtQuick 2.12
2 import QtQuick.Studio.Components 1.0
3 import QtQuick.Timeline 1.0
4 import QtQuick.Studio.Effects 1.0
5
6 Item {
7     width: 270
8     height: 540
9
10    Image {
11        id: background
12        source: "background.png"
13        scale: 0.5
14        transformOrigin: Item.TopLeft
15        fillMode: Image.PreserveAspectFit
16
17        Text {
18            id: text1
19            x: 188
20            y: 140
21            color: "#ffffff"
22            text: qsTrId("COTTON 30°")
23            font.pixelSize: 26
24            font.bold: true
25            font.family: "Tahoma"
26        }
27    }
```

You can also view and modify other types of text files.

To open the search dialog in the **Code** view, go to **Edit > Find/Replace > Find/Replace**. You can also select **Ctrl + F**.

You can use a subset of the functions available in the **Edit mode**:

- › Semantic Highlighting
- › Checking Code Syntax
- › Completing Code
- › Indenting Text or Code
- › Using Qt Quick Toolbars
