Qt Creator Manual > [Validating with Target Hardware](#)

You can use the live preview feature to preview a UI file or the entire UI on the desktop, as well as on embedded Linux devices. The changes you make to the UI are instantly visible to you in the preview. While the preview is available on Android devices, it does not instantly reflect the changes made to the UI in the editor. It shows the snapshot of your project from the moment you start the preview on the device.

In addition, you can use Qt Design Viewer to run [Qt Quick UI projects](#) in most widely-used web browsers on the desktop and in mobile devices. This enables you to easily share your designs with reviewers who don't have Qt Creator.

› Previewing on Desktop

You can preview individual QML files or the whole UI.

› Previewing on Devices

You can preview Qt Quick applications on devices that you have connected to the development PC. For more information, see [Connecting Devices](#).

› Previewing in Browsers

You can open [Qt Design Viewer](#) in a browser and load applications to it.
