

Using Subversion

Subversion is an open source version control system.

In addition to the standard version control system functions described in [Using Common Functions](#), you can select **Tools > Subversion > Describe** to display commit log messages for a revision.

By default, you are prompted to confirm that you want to submit changes. To suppress the prompt, select **Edit > Preferences > Version Control > Subversion**, and then deselect the **Prompt on submit** check box.

To show whitespace changes in annotation views, deselect the **Ignore whitespace changes in annotation** check box.

You can use Git as a client for a Subversion server. For more information, see [Using Git with Subversion](#).
