

Using Custom Fonts

For your UI to use custom fonts when you preview it on a device, you have to import the fonts to the project folder. Qt Design Studio deploys them to the device along with your UI.

Note: Use fixed-width fonts if you plan to animate running numbers, so that they do not appear to jump around the screen when they change.

To add fonts:

1. Select **Assets** > **+** .
2. Browse to the folder that contains the font files and select them, and then select **Open**.
3. Select the location where the file will be saved in the **Add Resources** dialog.
4. Select **OK** to save the fonts.

The fonts are added to the list of fonts for the **Font** property in [Properties](#).
