

Qt Design Studio Manual > Checking Code Syntax

# **Checking Code Syntax**

As you write code, Qt Design Studio checks code syntax. When Qt Design Studio spots a syntax error in your code, it underlines it, displays an icon, and shows error details when you move the mouse pointer over the error or the icon.

If a fix is available, you can apply it by clicking  $\P$ .

Similarly, when you are working on an instance of a JavaScript object notation (JSON) entity, Qt Design Studio underlines errors in the JSON data structure.

In addition to underlining, errors and warnings are marked with icons and annotated. When writing QML or JavaScript code, the annotations may contain error codes listed in JavaScript and QML Error Codes.

```
import QtQuick 2.10
import myapp 1.0

Rectangle {
    width: Constants.width
    height: Constants.height

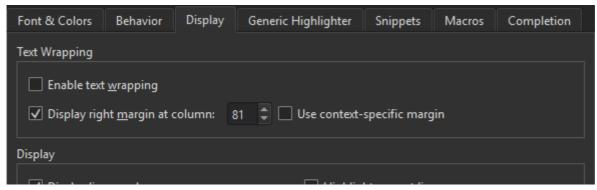

clor

Invalid property name "clor". (M16)

Invalid property name "clor". (M16)
```

#### **Specifying Line Annotation Positions**

To specify the position where the annotations are displayed, select **Edit** > **Preferences** > **Text Editor** > **Display** > **Line annotations**, and then select whether to display the annotations directly next to the code, aligned to the right of the code, or in the right margin. Showing annotations between lines can be useful if there is usually not enough space to display annotations next to the text.

✓ Mark <u>t</u> ext changes	✓ <u>A</u> nimate matching parentheses
✓ <u>V</u> isualize whitespace	✓ <u>H</u> ighlight matching parentheses
Center <u>c</u> ursor on scroll	Always open links in another split
✓ Auto-fold first <u>c</u> omment	✓ Display file encoding
✓ Highlight search results on the scrollbar	✓ Display file line ending
Animate navigation within file	
✓ Line annotations	
Next to editor content	
Next to editor content     Next to right margin	
Next to right margin	

If you hide the annotations by deselecting the check box, you can move the mouse pointer over an icon to view them.

#### JavaScript and QML Error Codes

You can run static checks on the QML and JavaScript code in your project to find common problems. To run the checks, select **Tools** > **QML/JS** > **Run Checks** or press **Ctrl+Shift+C**. The results are shown in the **QML** and **QML Analysis** filters in Issues.

Many of the error messages are similar to the ones in Douglas Crockford's JSLint tool. For more information about JSLint errors, see JSLint Error Explanations.

ld	Severity	Message	Description
M1	Error	Invalid value for enum	
M2	Error	Enum value must be a string or a number	
M3	Error	Number value expected	
M4	Error	Boolean value expected	
M5	Error	String value expected	
M6	Error	Invalid URL	
M7	Warning	File or directory does not exist	
M8	Error	Invalid color	
M9	Error	Anchor line expected	
M10	Error	Duplicate property binding	See also: Duplicate key '{a}'.
M11	Error	Id expected	See also: Expected an identifier and instead saw '{a}' (a
Id	Severity	Message	Description

## Qt DOCUMENTATION

14117	LIIOI	Daplicate la	ras in a me mast be anique, see also, papileate key (a).
M16	Error	Invalid property name name	
M17	Error	Name does not have members	
M18	Error	Field is not a member of object	
M19	Warning	Assignment in condition	It could be a typing error. If it is intentional, wrap the assignment in parentheses.
M20	Warning	Unterminated non-empty case block	Case blocks should either be empty or end in a flow control statement such as break, return or continue.  Alternatively you can indicate intentional fall through by ending with a // fall through comment.
M23	Warning	Do not use eval	See also: eval is evil.
M28	Warning	Unreachable	Indicates that the underlined statement will never be executed.
M29	Warning	Do not use with	See also: Unexpected 'with'.
M30	Warning	Do not use comma expressions	
M31	Warning	Unnecessary message suppression	
M103	Warning	Name is already a formal parameter	
M104	Warning	Name is already a function	
M105	Warning	Var name is used before its declaration	
M106	Warning	Name already is a var	
M107	Warning	Name is declared more than once	Variables declared in a function are always visible everywhere in the function, even when declared in nested blocks or for statement conditions. Redeclaring a variable has no effect.
M108	Warning	Function name is used before its declaration	See also: {a} was used before it was defined.
M109	Warning	Do not use Boolean as a constructor	See also: Do not use {a} as a constructor.
M110	Warning	Do not use String as a constructor	See also: Do not use {a} as a constructor.
M111	Warning	Do not use Object as a constructor	See also: Do not use {a} as a constructor.
M112	Warning	Do not use Array as a constructor	See also: Do not use {a} as a constructor.
M113	Warning	Do not use Function as a constructor	See also: Do not use {a} as a constructor.
M114 <b>Id</b>	Hint Severity	The function keyword and the opening paragehesis	See also: Expected exactly one space between {a} and {b}.  Description

### Qt DOCUMENTATION

		in Qt Design Studio	
M220	Error	This type (type name) is not supported as a root element of a UI file (.ui.qml)	For more information about supported QML types, see UI Files.
M221	Error	This type (type name) is not supported in a UI file (.ui.qml)	For more information about supported QML types, see UI Files.
M222	Error	Functions are not supported in a UI file (.ui.qml)	For a list of supported JavaScript functions, see Supported Methods.
M223	Error	JavaScript blocks are not supported in a UI file (.ui.qml)	For more information about supported features, see UI Files.
M224	Error	Behavior type is not supported in a UI file (.ui.qml)	For more information about supported QML types, see UI Files.
M225	Error	States are only supported in the root item in a UI file (.ui.qml)	For more information about supported features, see UI Files.
M226	Error	Referencing the parent of the root item is not supported in a UI file (.ui.qml)	For more information about supported features, see UI Files.
M227	Error	Do not mix translation functions in a UI file (.ui.qml)	Even though several different translation functions, such as qsTr and qsTrId are supported, you should pick one and use it consistently within a UI file. For more information, see Qt QML Methods.
M300	Error	Unknown component	
M301	Error	Could not resolve the prototype name of object	
M302	Error	Could not resolve the prototype name	
M303	Error	Prototype cycle, the last non-repeated component is name	
M304	Error	Invalid property type name	
M305	Warning	== and != perform type coercion, use === or !== to avoid it	See M126.
M306	Warning	Calls of functions that start with an uppercase letter should use new	By convention, functions that start with an uppercase letter are constructor functions that should only be used with new.
M307	Warning	Use new only with functions that start with an uppercase letter	See also: Do not use {a} as a constructor.
M308	Warning	Do not use Number as a constructor	See also: Do not use {a} as a constructor.
M309 <b>Id</b>	Hint <b>Severity</b>	Use spaces around binary operators Message	Description

		literal	
M311	Hint	Use type instead of var or variant to improve performance	
M312	Error	Missing property number	
M313	Error	Object value expected	
M314	Error	Array value expected	
M315	Error	Value value expected	
M316	Error	Maximum number value is number	
M317	Error	Minimum number value is number	
M318	Error	Maximum number value is exclusive	
M319	Error	Minimum number value is exclusive	
M320	Error	String value does not match required pattern	
M321	Error	Minimum string value length is number	
M322	Error	Maximum string value length is number	
M323	Error	Number elements expected in array value	See also: The array literal notation [] is preferable.
M324	Error	Hit maximum recursion limit visiting AST, the code model will be unreliable and most likely invalid	
M325	Warning	Logical value does not depend on actual values	
M326	Error	Components are only allowed to have a single child element	For more information, see Component.
M327	Warning	Components require a child element	For more information, see Component.
M400	Warning	Duplicate import	An import statement has been added twice. For more information, see Import Statements.

### Resetting the Code Model

If you change the build and run kit when you have QML files open in the code editor, the code model might become corrupt. The following error message indicates that this might have happened: *Using Qt Quick 1 code model instead of* 

code editor or when you open a QML file in Qt Design Studio.

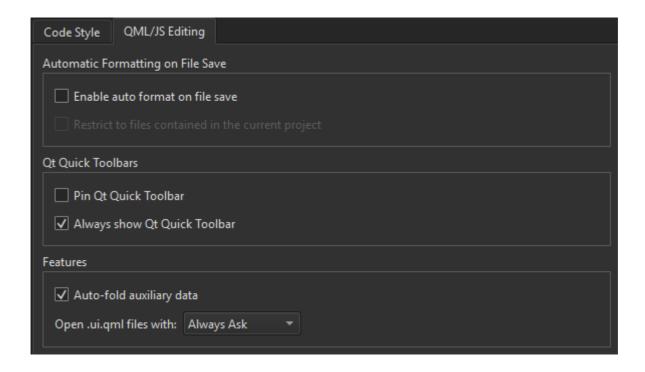

To reset the code model, select **Tools** > **QML/JS** > **Reset Code Model**.

#### Inspecting QML and JavaScript

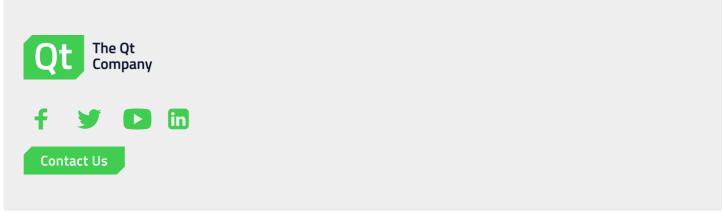

To inspect QML and JavaScript properties, methods, and enums, move the cursor over them and select **Tools** > **QML/JS** > **Inspect API for Element Under Cursor**.

#### Automatically Formatting QML/JS Files

To automatically format QML/JS files upon saving, select **Edit** > **Preferences** > **Qt Quick** > **QML/JS Editing** > **Enable** auto format on file save.
