Using Mercurial

Mercurial is a free, distributed source control management tool.

In addition to the standard version control system functions described in Using Common Functions, you can select the following functions in the **Tools** > **Mercurial** submenu:

Menu Item	Description
Import	Apply changes from a patch file.
Incoming	Monitor the status of a remote repository by listing the changes that will be pulled.
Outgoing	Monitor the status of a remote repository by listing the changes that will be pushed.
Pull	Pull changes from the remote repository.
Push	Push changes to the remote repository.
