Qt Creator Manual › Finding

Finding

> **Finding and Replacing**

The incremental search highlights the matching strings in the window while typing and the advanced search enables you to search from currently open projects or files on the file system. You can conduct incremental and advanced searches in parallel.

In addition, you can search for symbols when you want to refactor code.

> **Searching with the Locator**

The locator provides one of the easiest ways in Qt Creator to browse through projects, files, classes, functions, documentation and file systems.
